

Service Tips from the Pros

Web Resources & Helping Yourself

While many do not proclaim to be a "handyman," if the proper tools and a little guidance is available including permission and positive encouragement from one's spouse...most are willing to invest their time and some sweat—equity into the repair and maintenance of their property. Who doesn't find some level of gradification when diagnosing and repairing something themselves—not to mention the savings.

Winnebago Industries provides a variety of "tools" for the end user and has been doing this for many years. Some might recall the stacks of free Parts Catalogs that were distributed through authorized dealers. That began in the '70s and it was 2001 when the parts information made its initial debut on the Winnebago public website. The oh-so-powerful 3-D Parts Catalog and Serialized Parts List information arrived on the web in 2011 and has become very popular with dealers and the customer.

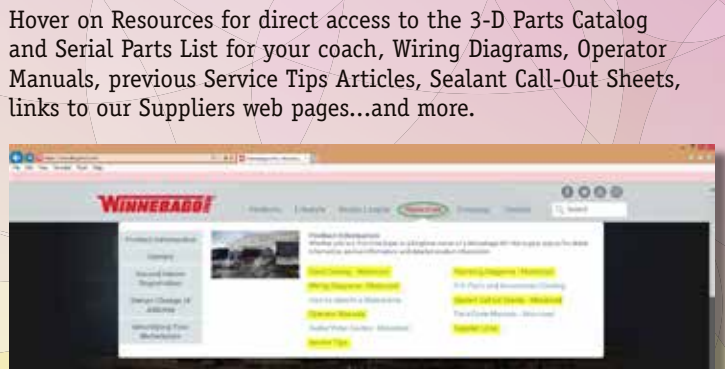

The first-in-the-industry Wiring Diagram Books of the '80s and '90s, while very popular, were replaced in 2002 when the wiring information arrived on the public website. Take time to investigate our website and you will see parts info dating back to 1975 models, wiring and plumbing information dating back to 1990 models, and so much more...available 24/7...and it's FREE!

Navigation of the Winnebago Industries website has become much easier recently. While the selections available on the 'toolbar' are similar to previous revisions (i.e., Products / Resources / Company / Contact Us, etc., it's no longer necessary to 'click' to move forward. Simply hovering the mouse over the respective subjects initiates an expanded drop list that itemizes the information inside.

The Winnebago Website / Home Page: <https://winnebagoind.com/>

Hover the mouse over Dealer Locator and 'click on Service' to locate an authorized dealership and their contact information.

Hover on Resources for direct access to the 3-D Parts Catalog and Serial Parts List for your coach, Wiring Diagrams, Operator Manuals, previous Service Tips Articles, Sealant Call-Out Sheets, links to our Suppliers web pages...and more.
